Lifepoint Informatics
Electronic Access to Laboratory Results

Lifepoint Informatics is a comprehensive and secure Web-based system that enables us to provide our Laboratory clients with electronic access to Lab results. Clients can either access results reporting, test ordering and supply ordering via a Web portal or we can provide a Lab results interface into their electronic medical record (EMR) system.

Intended Users
- Ordering clinicians
- Nurses
- Medical assistants or clerical staff that would need access to Lab results or who place Lab supply orders

Features

With this Web-based system, clients can:
- Access results from anywhere with Internet capabilities.
- Utilize it as an EMR system to store patient demographic information and order Lab tests.
- View and print Lab results.
- Print on demand as needed or schedule auto-print batches at times of your choice.
- Attach electronic "sticky notes" to Lab reports for follow-up activity.
- Create customized cumulative and activity reports to include abnormal results.
- Order Lab supplies.

Benefits
- Placing your Lab order in Lifepoint increases the accuracy of the order.
- Saves time. You can access reports real time versus waiting for scheduled batched printing times and/or without a phone call to the Laboratory.
- Saves space. Eliminates the need for dedicated Lab hardware to access results.
- Improves workflow by reducing the need for multiply copies of paper reports. You can view pendings online and print finals if a hard copy is still desired.
- Customized reports can be pulled as you need them, when you need them.
- Improved turnaround times on your supply orders. You will receive confirmation from the Lab that your supply order has been received for processing.

For additional information or to request Lifepoint access for your facility, please contact Wendy Daigle, Newton-Wellesley Hospital Laboratory Outreach Program Manager at 617-243-5898 or *wdaigle@partners.org*.

NEWTON-WELLESLEY HOSPITAL

PARTNERS HEALTHCARE | FOUNDED BY BRIGHAM AND WOMEN'S HOSPITAL AND MASSACHUSETTS GENERAL HOSPITAL

System Requirements	Minimum	Preferred
PC	Pentium II, 400 MHz	Core, 2 GHz
